

ACADEMIC YEAR: 2020-2021 FALL SEMESTER

SWE 312

Software Construction and User Interface

Instructor: Layla Albabtain

Name: Ghadah Alabdulaziz

ID:201722207

We've Divided our work into programming / Database and graphical user interface
Reema Aldaham did the programming part + some parts of the graphical user interface

What I've did in the project:

I did the database part also helped Reema with the graphical user interface.

I created my database based on our simple requirements regarding our banking system.
I created a schema called BankSys that contains of three classes or tables which are
Account, Transaction and user also all consists of values.

Problems I've faced:

I didn't know how to connect my database with our code which is reema working on

How did I've overcome my problem:

By searching and asking ms. Layla for help, and as always she leaded me.

What issues the team has faced:

Thanks god I've worked with my great colleague Reema we really worked hard
But maybe the time was running out of us because we had so many projects at the same time.
